RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 146 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1872 Excerpt: . . . clockwork, kept their image immovable on the photographic plate, while the image of the moon, owing to its angular motion being different to that of the sun, continued to advance over the plate. Dr. Curtis, however, has strikingly shown by photographing from an artificial eclipse in which the moon was represented by black paper, notched for the prominences and corona, that this projection of the prominence-images on the disk of the moon is caused by a kind of photographic irradiation on the prepared plate, and is therefore an entirely mechanical action which always occurs where an intensely bright object is in immediate contact with a dark one, and the duration of the action of the light (time of exposure) has exceeded the proper limit. The eclipse of 1868 observed in India, though furnishing so many valuable details concerning the prominences, was almost without results with respect to the corona. The various observers of the eclipse in America were all the more eager, therefore, to examine the details of this remarkable phenomenon, its form, its spectrum, and especially its connection with the prominences. The photographs of short exposure (from one to seven seconds) show the corona only in its brightest parts close to the edge of the sun; still they give, especially those taken at Ottumwa, a tolerably distinct image of it, with nearly the same form as it presented to the unassisted eye. The curved path of the rays, and the varying intensity with which they...
