RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 200 pages. Dimensions: 9.7in. x 7.4in. x 0.4in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1915 Excerpt: . . . and activity of minute animal parasites (protozoa) which are conveyed to the affected animals by means of the cattle tick Margaropus annulatus. After the microscopic protozoan is injected into the blood of a susceptible animal it attacks the red Note. --This bulletin is a revision of and supersedes Farmers Bulletin 258. throughout the South. 23613--Bull. 569--14 It is of interest to farmers blood cells, causing them to break down. The disease is characterized by high fever, by destruction of red corpuscles, and the consequent excretion of the coloring matter of the blood by the kidneys, causing a reddish discoloration of the urine, by enlarged spleen, engorged liver, thick, flaky bile, more or less jaundice, emaciation, and death in from 10 per cent of the chronic to 90 per cent of the acute cases. The peculiarity about this disease is that the animals responsible for the spread of the malady are apparently healthy, although containing the protozoa in their blood, while those that become diseased do not, as a rule, convey the affection to others. In the few instances where they do, it is not by contact, but indirectly by means of the progeny of the ticks from these diseased animals. Infection is not transmitted by the air, urine, saliva, manure, or in any other natural manner than by cattle ticks. HISTORY. Texas fever was probably introduced into the United States with the importations of cattle by the Spaniards during the early colonization of Mexico...
